

## Pilot units at your site, for rent or sale

Our pilot units are optimized based on Applexion's R&D and industrial experience.

They are designed to help you reach your process development and industrialization goals.

# Pilot units at your site, for rent or sale

Pilot studies are a critical step for your purification process development. Pilot units are used to test the feasibility of your process, to define key parameters for process scale-up or even for a small production. You can also optimize your existing process to improve or upgrade it.

## FEASIBILITY

Validate  
**purification levels**  
and **technical feasibility**

## SCALE-UP

Validate  
**industrial performances**  
and **optimize process**

## SMALL PRODUCTION

**Produce samples**  
for market testing  
or full production  
of small quantities

## RANGE OF STANDARD PILOTS

ION EXCHANGE

CHROMATOGRAPHY

MEMBRANE FILTRATION

## YOUR EXPERIENCE

To reach your process development goals, applexion provides 2 complementary offers depending on your needs:

- if you need a full support for your process development, entrust the realization of your pilot studies to applexion's piloting services
- if you prefer to carry out your pilot studies on your own, get a performant pilot unit from Applexion

- All pilot units can be customized to meet specific needs
- First load of resins/membranes included
- Consumables available upon request
- Training, remote or on-site support available upon request
