

Filter Boost

Ceramic filtration upgrade to decrease utilities consumption

Upgrade solution

Choose a “do better” solution to upgrade your filtration system.

Redesign Cleaning In Place (CIP) process.

Adjust Membrane Design to your needs.

Filter Boost

Ceramic filtration upgrade to decrease utilities consumption

YOUR BENEFITS

ENERGY SAVINGS

NON-STOP
CONFIGURATION

CHEMICAL USE
REDUCTION

EFFLUENT
REDUCTION

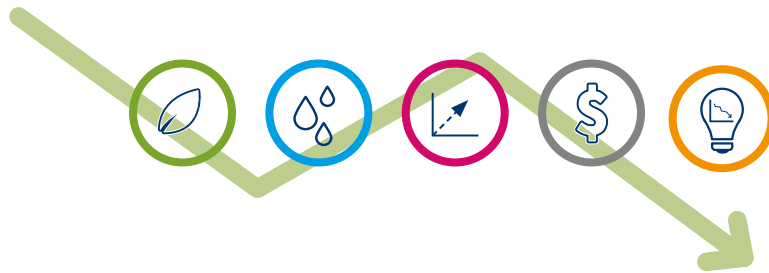

OPEX REDUCTION

INCREASE
PRODUCTION

To respond to new industrial challenges, Filter Boost allow you recycling utilities on membrane filtration system. The principle is to recycle water, chemicals and energy during Cleaning In Place (CIP).

YOUR EXPERIENCE

Thanks to this upgrade, you will optimize chemical and water consumption by implementing a recycling routine for CIP solutions and steam (and energy) consumption by recovering heat from other hot liquids.

With an optimal CIP process,
reduce drastically :

- **Chemical use**
- **Fresh water use**
- **Daily effluent production**
- **Operating expenses**
- **Steam consumption**

 **Applexion**
beyond purification
