APPLEXION MANAGEMENT COMMITMENTS ON CSR

For more than 50 years, we have been designing and manufacturing equipment for the purification of ingredients from agricultural raw materials (plants, milk, biomass), and providing services and consumables for their operation throughout the world.

We are convinced that this processing activity has multiple impacts on the environment and sustainable development. **Our ambition is to:**

- Help our customers to produce food ingredients more efficiently, especially in areas with high population and urban growth
- Enable them to produce new healthy ingredients and other bio-based products on a large scale with a low carbon footprint
- Reduce the carbon impact of our own operations

How will we do this?

- By measuring our carbon footprint
- By Integrating carbon footprint criteria into the decision chain
- By improving the efficiency of production processes and reducing the consumption of necessary resources (water, energy, inputs) at our customers' sites
- By contributing to pollution control and prevention through better management of effluents
- By modernizing industrial tools and technologies, enabling more frugal production,
- By participating in technological innovation to produce new healthy ingredients and low-carbon biobased products on a large scale
- By making these services and technologies available worldwide
- By raising awareness of decarbonization issues among our teams on a regular basis, and implementing best practices

With whom are we making these commitments?

- With our employees, whose fulfillment and diversity we wish to promote: career management, solidarity, sustainable and responsible work environment, etc.
- With our clients, whose full satisfaction we aim to achieve in compliance with regulatory and ethical frameworks
- With our stakeholders in transparency: accountability and support for our suppliers, commitments to our professional and local communities
